GENERAL INFORMATION ON THE USAGE OF *Grandt Line* PARTS

Most of our parts are injection molded in medium impact black poly-styrene. Where bearing surfaces or parts are subject to breakage from handling, a few parts are molded in Delrin^R, in appropriate colors.

Parts shown are molded in Styrene, unless otherwise noted. All parts are drawn actual size. In some cases where enlargement is used to show detail, a black silhouette shows actual size.

Styrene parts may be cemented to other styrene parts using Testors Liquid or other liquid cements. Apply the liquid sparingly, using a 5-0 brush. Glue will not adhere to Delrin^R parts. It is necessary to *surround* these parts with cement. Styrene and Delrin^R parts may be applied to wood using any of the instant-set adhesives, such as S-Dine, Eastman 910, Loctite 404 or Crazy Glue.

Before assembling plastic models, a good modeler removes parting lines and sprue marks. This may be done with a razor knife or a small file.

Styrene and Delrin^R parts may be spray painted using any of the commercially available model railroad paint. Care should be taken not to apply the paint too heavily. Heavy coats of paint will cover the fine details on the part and can cause dissolving or "orange-peel" effects. If brush painting is necessary, apply a coat of Floquil Barrier and then apply paint sparingly.

Prototypes for *Grandt Line* Components are thoroughly researched. Our parts are as accurate as our information and the manufacturing process permit.

Narrow gauge plans and/or photos are available from the following sources:

Edmund G. Collins, Jr. Trexler Ave, Kutztown, Pa 19530

Coronado Scale Models 1544 E. Cypress St, Phoenix, Arizona 85006

Herman Darr PO Box 81, Hawthorne, Nevada 89415

John W. Maxwell 3220 Balsam Street, Wheat Ridge, Colo 80033

We feel that the most accurate plans and information are available from these sources. Accurate drawings have also been published by *Model Railroader* and *Railroad Model Craftsman*.

PAINTING TIPS

Proper painting techniques and equipment are not only important to the overall appearance of a model, but also help to bring out and enhance the fine detail that styrene injection molding makes possible.

Strikingly realistic results are possible using an air brush to apply several very light, successive oversprays of different colors over a base or primer coat. Previous colors should always be allowed to "bleed", or show through. Where styrene is used to represent wood, it should be distressed prior to the beginning of assembly. Very light distressing with the tip of a jewelers file may also be done after each overspray in order to help bring out the "grain" and give contrast between individual "boards".

Using Floquil colors, the following sequence of coats has been found to give excellent results for red freight cars. Thin the paint 50/50.

Begin with a coat of gray primer. Follow this with successive coats of Roof Brown, Depot Buff, Grimy Black, and a 50/50 mixture of Box Car and Tuscan Red. Add a final coat of Rock Island Maroon.

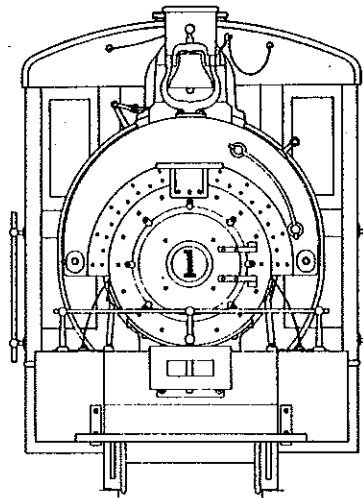

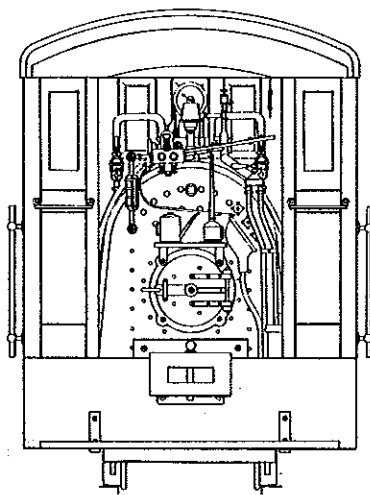

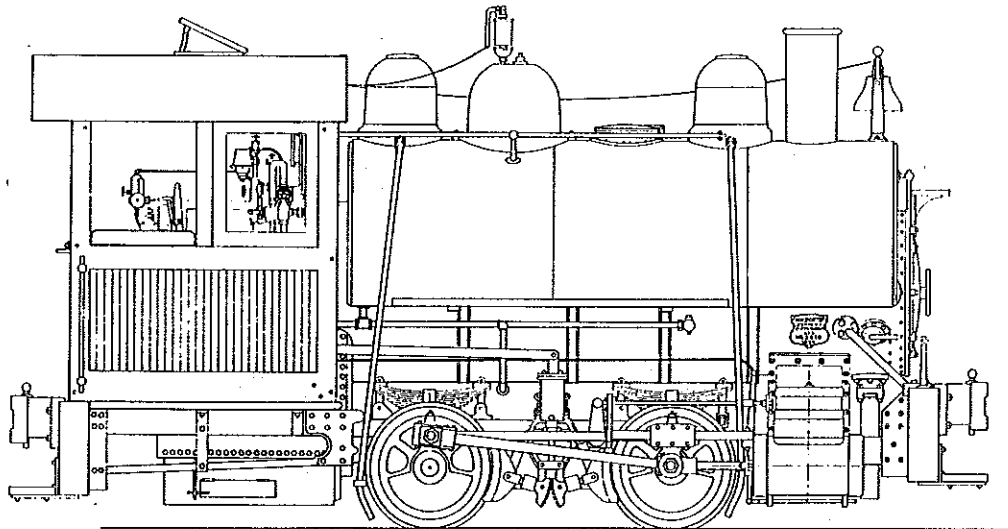

When the final color is a lighter version of the basic color, as for example, Rock Island Maroon is to the deeper red of the previous overspray), the natural air pattern from the air brush will allow fine details to be subtly highlighted, and, therefore, to be more visible.

After applying decals, a very light overspray of colors (such as Dust, Foundation or Grimy Black) can be used to tone down the decals and to kill any shine from the decal film. As with any new technique, some experimentation on scrap materials is recommended before trying on newly assembled models.

H K Porter Company Four-Wheel-Connected Saddle-Tank Locomotive, Class B-S

For Contractors' Use, Shifting, and Special Services. Wide and Narrow Gauge.

O_n3 KIT #3060

OVER 200 STYRENE, DELRIN^R, BRASS AND STEEL PARTS
SELF-QUARTERING DRIVERS, WITH STEEL RIMS AND AXLES

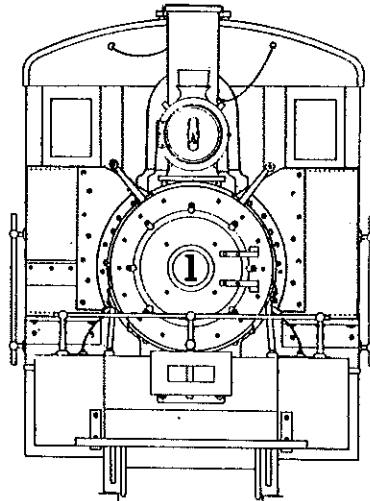

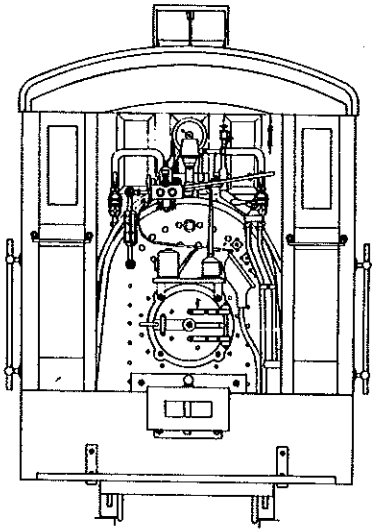

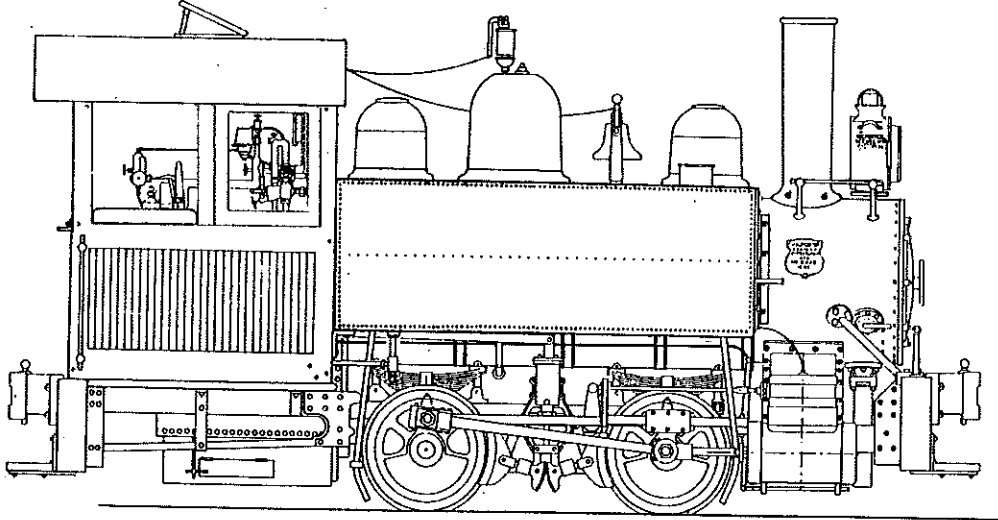

H.K. Porter Company specialized in light locomotives for industrial use for well over fifty years, manufacturing during their hey-day in the early 1900's over one every day. Most of these went to contractors, loggers and mining operations. These light locos (ten to thirty ton) helped many companies start in business at a reasonable cost. Later, as business improved, heavier locos were ordered and the little tea kettles were relegated to yard switching jobs.

We have selected the popular 18 ton, 36" gauge to model. We have modified the pilot beam to accommodate either link and pin couplers or MCB couplers at a height used by narrow gauge railroads commonly modelled.

H K Porter Company

18 TON 0-4-0-ST RECTANGULAR SIDE TANK LOCOMOTIVE

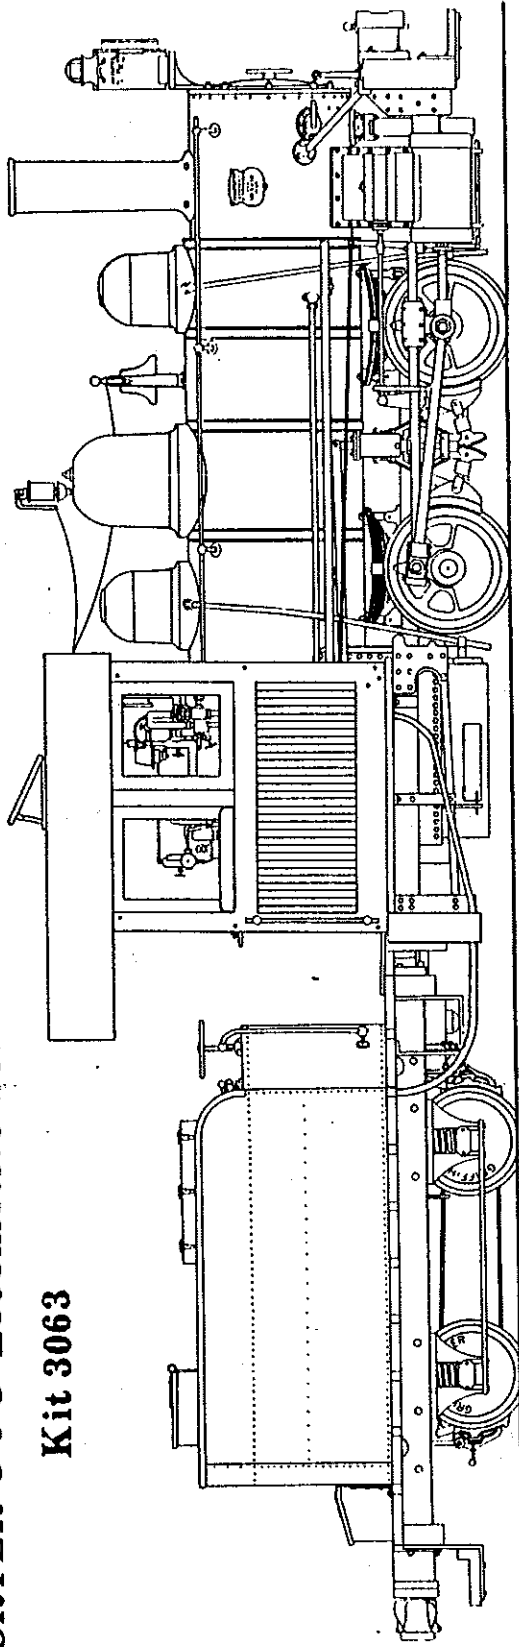

On3 KIT #3062

THE SAME QUALITY FEATURES AS OUR #3060
CAB DETAIL AND MOTORIZING KITS ARE AVAILABLE SEPARATELY

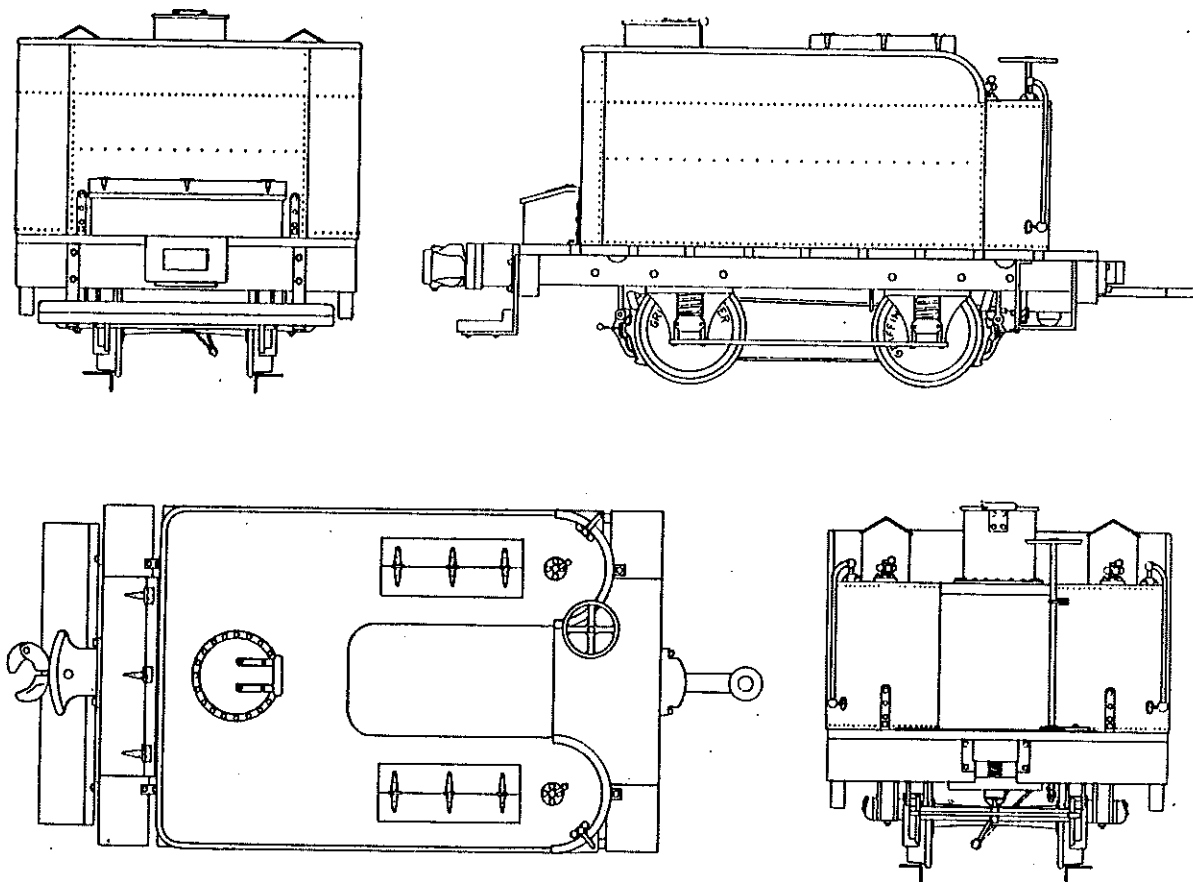

PORTER O-4-O Locomotive with Tender

Kit 3063

If the fuel and water capacity of the saddle tanks or side tanks was not enough for extended runs, a model with an auxiliary tender could be ordered from the Porter factory. This is the model which we have chosen for this kit. It had a 600 gallon, one ton coal capacity tender, omitting the tanks over the boiler and the fuel bunker in the cab. This arrangement reduced the weight of the loco from 18 to 15 tons, with (obviously) a reduction in tractive effort. The auxiliary tender could also be ordered for existing saddle or side tank locos if the fuel and water capacity of the loco was not enough for operating conditions. In this case, the water in the loco tank or tanks would add to the weight and tractive effort.

The popular 15 ton, 36" gauge is used for our model. We have modified the pilot beam to accommodate either link and pin couplers or MCB couplers at a height used by narrow gauge railroads commonly modelled. The styrene parts used are easily modified to suit your needs or favorite loco style.

800 Gallon Auxiliary Tender for Porter 10 x 16 Locomotive

Kit 3064

Many users of small locos found that the water capacity of the saddle tanks and the fuel capacity of the small bunkers in the cab were not enough for a days work in the mines, quarries and lumbering operations. To solve this problem, they ordered an auxiliary tender from the manufacturer. Some operators made their own, as evidenced by pictures of locos in the various books that have been published, but H.K. Porter had available several sizes of tenders for "retro-fit". They also manufactured a series of "locomotives with tenders" in several sizes.

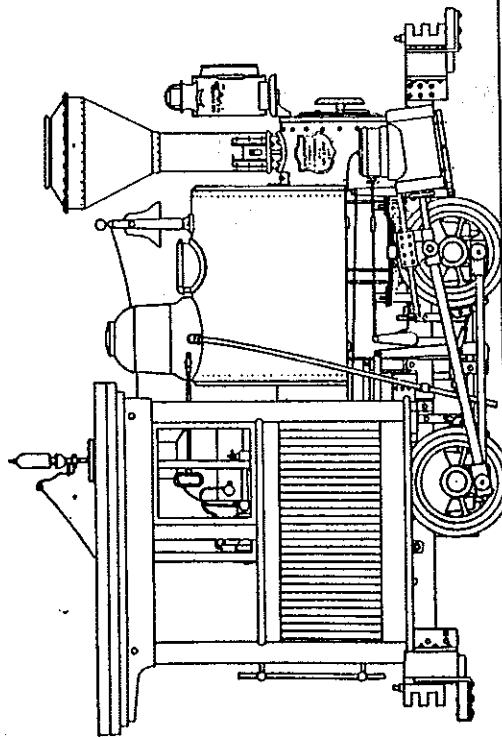

This kit represents a tender with a capacity of 800 gallons of water and 3,000 pounds of coal or 1-1/4 cords of wood fuel. It is of the four-wheel configuration.

H K Porter Company Four-Wheel-Connected Saddle-Tank Locomotive, Class B-S

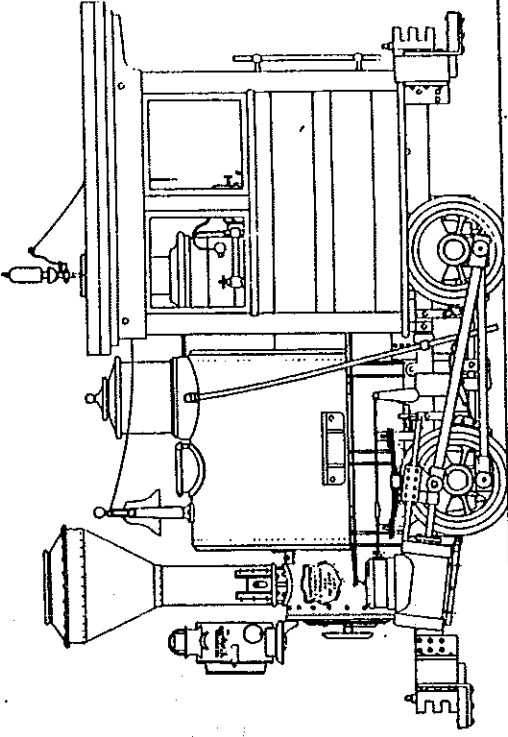

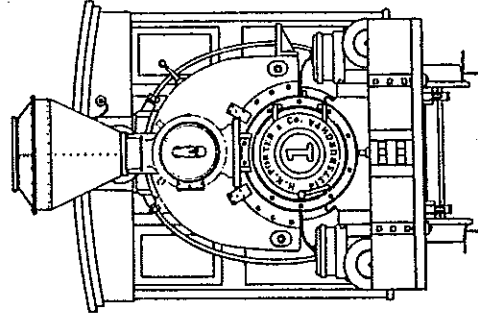

For Contractors' Use, Shifting, and Special Services. Wide and Narrow Gauge.

H.K.Porter Co. specialized in light locomotives for industrial use for well over fifty years, manufacturing during their hey-day in the early 1900's over one every day., Most of these went to contractors, loggers and mining operations. These light locos (five to thirty ton) helped many companies start in business at a reasonable cost. Later, as business improved, heavier locos were ordered and the little tea kettles were relegated to yard switching jobs. One of the popular sizes of light locomotives was the 7" x 12" cylinder size. These could be ordered in many configurations from an O-4-0 wheel arrangement to O-6-0, Forneys and even steam dummies. The 7" x 12" cylinder O-4-0 wheel arrangement was carried as a stock item, while others were made to order. Locos could be ordered with different sized drivers, different couplers and coupler heights and in many gauges. 20", 24" 30", 36", 42", 48", 56-1/2", 60", 60cm, 75 cm and meter gauges are listed in the Porter Locomotive Co. records in just one year!

We have chosen the 8 ton, 36" gauge locomotive with 24" drivers as the basis for this kit. The styrene parts used are easily modified to suit your needs or favorite loco style. Parts are included for cab interior details. A cast metal engineer and a "lump" of chain are also supplied. You may model this locomotive in either of two periods: 1889 or 1900. Parts are supplied for either version. The 1889 version is shown in Figure B and the 1900 version in Figure A. Available separately is a custom-machined Micro-Mo 15:1 motor/gear box and gear tower kit. This is stock #7063.

PLYMOUTHS...PLYMOUTHS...PLYMOUTHS...PLYMOUTHS

GRANDT LINE HAS THE INDUSTRIAL LOCO YOU'VE BEEN LOOKING FOR IN 1/4" SCALE

PLYMOUTH FL1 FIVE TON GAS-MECHANICAL INDUSTRIAL LOCOMOTIVE Plymouth F Series locos were made in the 1920's to replace steam locos in quarries, steel mills, brick yards, logging operations, cranberry bogs, salt evaporation plants and other industrial plants, as well as (without cabs) in mines. Most common gauges were 2-foot and 3-foot. These locos are motored by Machima M19CF 5-pole motors which fit entirely inside the hood, enabling full detailing of the cab area. Kits include all necessary parts, including cab details.

C&S / RGS STEEL UNDERFRAME STOCK CAR

- INJECTION MOLDED THROUGHOUT
- DELRIN TRUCKS AND COUPLERS
- BETTENDORF UNDERFRAME
- MURPHY ROOF
- COMPLETE UNDERBODY DETAIL
- NON-MAGNETIC WHEEL SETS
- OPERATING DOORS
- OVER 100 PARTS

In 1910, 70 stock cars were built by the Colorado & Southern RR from parts manufactured for them by the Bettendorf Axle Co. Featuring steel underframes and cast steel trucks, these cars were the most modern narrow gauge freight cars to appear on the Colorado scene until the early 1940's. Upon the demise of the C&S in 1938, 34 cars were sold to the R.G.S. They were a common sight in stock trains on both the R.G.S. and D.&R.G.W. until scrapped in 1952. A few stock cars were sold by the C&S to the White Pass & Yukon in 1942 where, although converted to flat cars, the underframes continued in daily use until the mid-1970's.

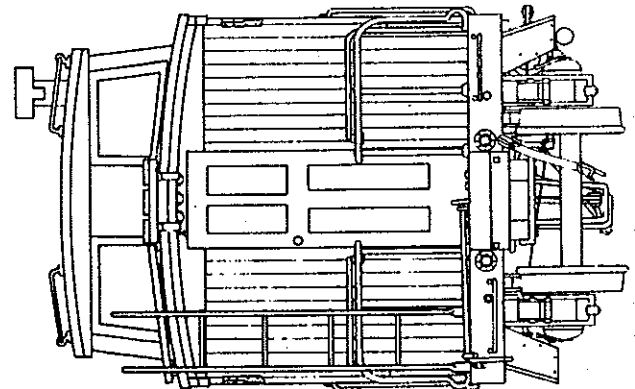

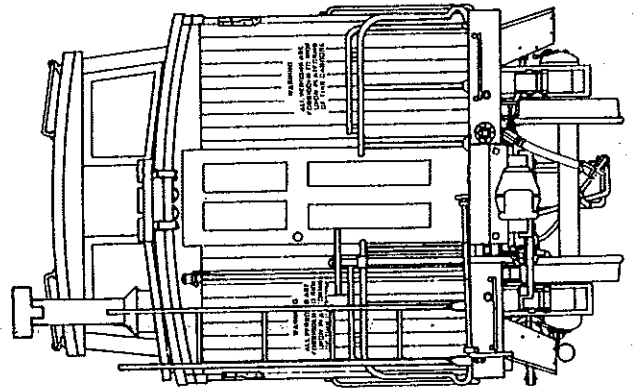

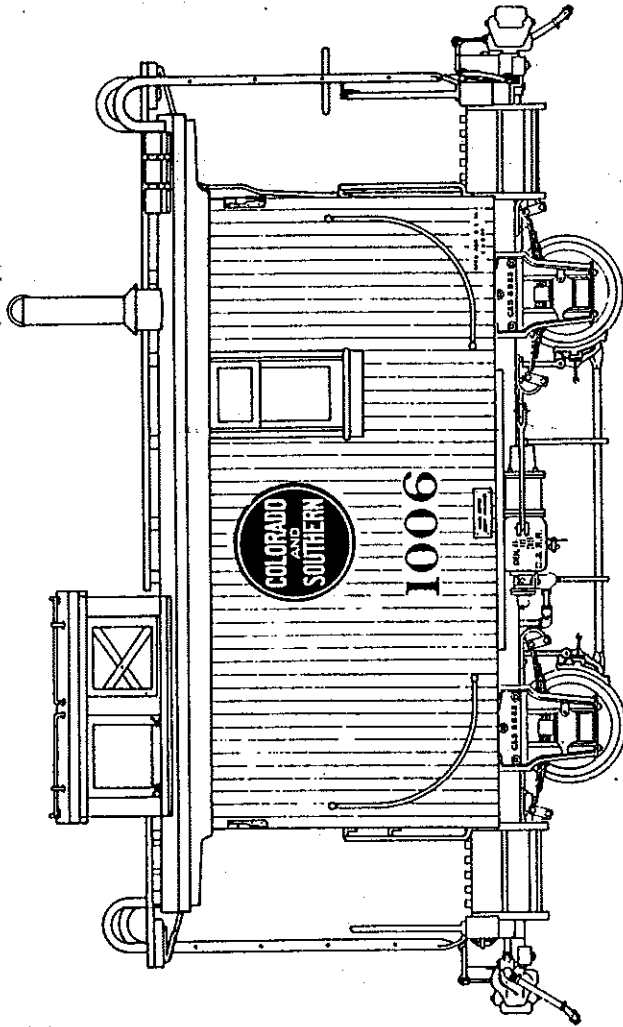

On3 KIT #3059

C & S Caboose # 1006

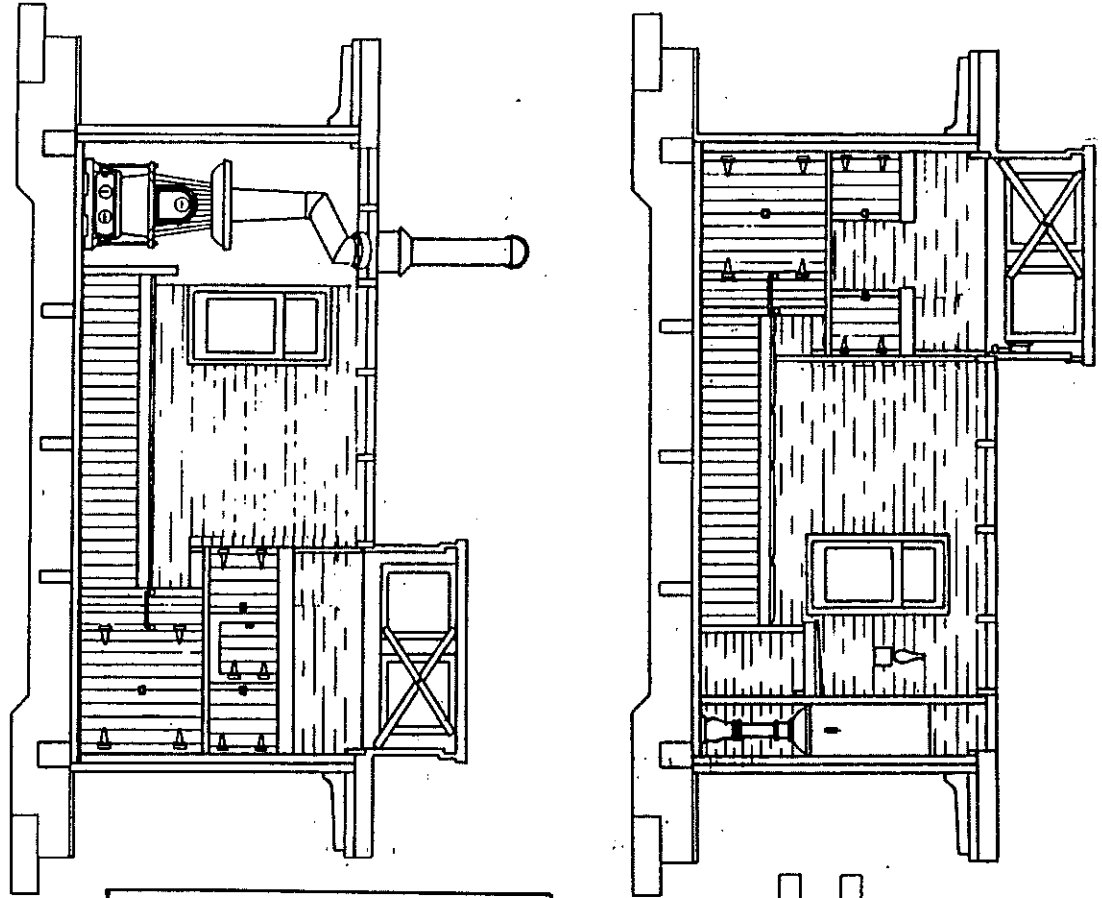

On3 KIT #3071

This kit is based on Colorado & Southern #1006, which is currently on display at Silver Plume, Colorado. All dimensions of the model are based on detailed measurements of the present caboose, as well as drawings, photos and information from some of the most trusted names in model railroading. We have tried to reproduce the caboose as it was in service, with allowances for manufacturing processes and modeling requirements.

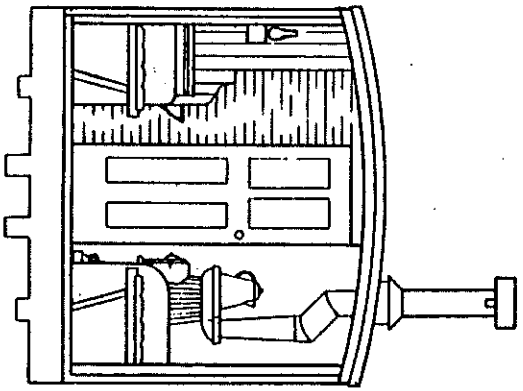

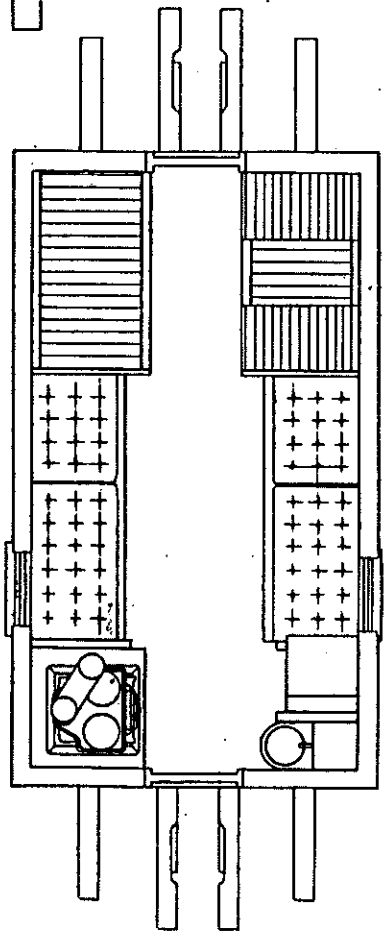

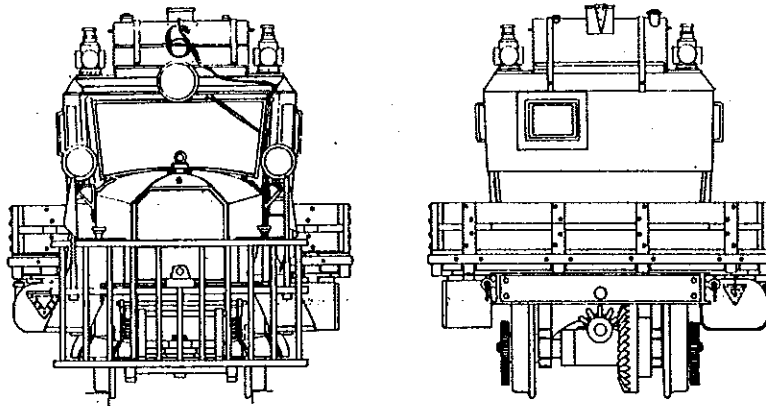

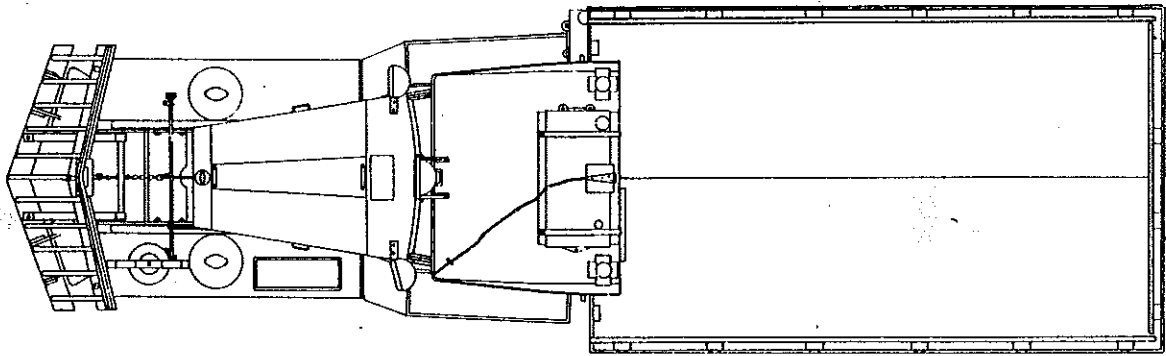

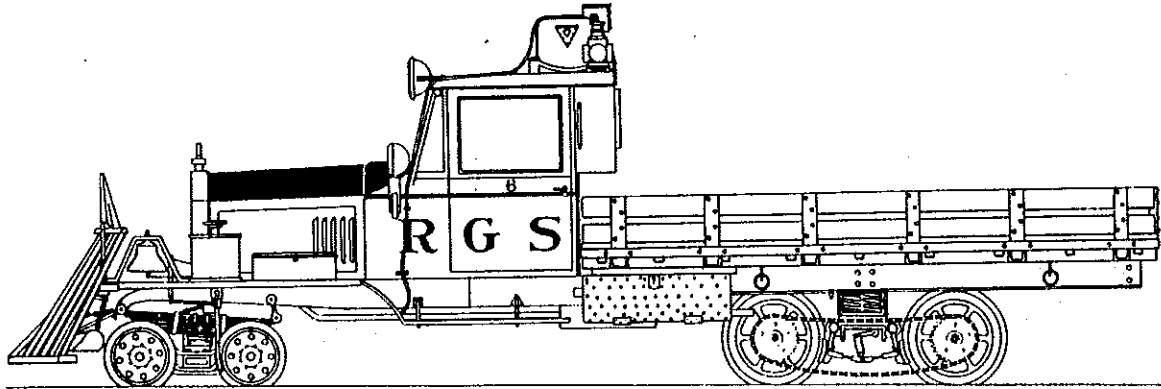

FEATURES

- Injection molded throughout
- Over 100 Styrene, Delrin[®], Brass and phosphor-bronze Parts
- Delrin[®] Bearings and Couplers
- Non-magnetic Wheelsets
- Complete Underframe Detail
- Underframe Will Accept New Kadee On3 Couplers

DETAIL KIT FOR

FAIRBANKS-MORSE #37 DUMP CAR On3 KIT #3103

This kit is easily assembled in either a static or operating model, and is designed to use Kadee #5 HO couplers, which scale out to just about right for a mining coupler. Wheels can be easily pushed in on their axles to 30" (HO) gauge. This is an appropriate car to be hauled by our 18 ton Porter.

FEATURES:

- Injection molded throughout in styrene and Delrin®
- Non-magnetic wheelsets
- Will accept Kadee® couplers
- Can be made Operable

UTLX Frameless Tank Car

On3 KIT #3079

FEATURES:

- Injected molded throughout
- Over 75 styrene and Delrin® parts
- Delrin® bearings and couplers
- Non-magnetic wheelsets
- Complete underbody detail
- Thinfilm™ decals
- Underframe will accept new Kadee On3 couplers

Our kit is for the basic UTLX Class VV Narrow Gauge Van Dyke tank car, as used after the 1956 renumbering. We have included some extra hardware, so that some variations may be made. A few parts are also included for a Class V car. To construct one of these cars, however, it will be necessary for you to purchase a few additional parts: brake cylinder (GL Part #97), additional piping (Part #112) and a strip of brass, .015"x.030".

 #129

D&RCW Brake Staff Brackets
w/ Miscellaneous Fittings
 #111
 in brass, #1111

NY Air Brake Set, Type K, 8" x 8"
#138

Set Includes: Misc. Pipe Fittings, Air Hoses (#112); Clevises (#114); Brake Chain; C&S Brake Staff Brackets, Fittings; Brake Wheel (#88); Retainer Valve; Cylinder Release Valve, Push Rod (#137); Brake Levers; NY Brake Cylinder, Mounting Brackets

On the C&S, this brake system was used on the truss rod cars with archbar trucks, built for and by the C&S. (ie. Gons, Box Cars, Stock Cars, Cabooses).
A similar system was used on most F&CC Box Cars. These cars were subsequently sold to other railroads. In many cases, the brake system was maintained (ie. SP NG, Montana Southern, Pacific Coast RR, Magma, and N-C-O).

Unpowered On3 Kit #3053

Motor, Gears, Drive, Pick-ups
On30 KIT #7052 On3 KIT #7053

Many mining companies made use of storage battery powered locomotives for haulage, occasionally running them from the mine heading out to the ore bins or tipples. Storage battery locomotives ran in size all the way from the little "trammers" to machines weighing over ten tons. This kit is for a fairly large one to accommodate a geared Micro-Mo motor for a possible power source, and is a composite of several locomotives used by the mining industry throughout the world.

Typical Application c. 1980

NY Air Brake Set, Type K, 8" x 8"
#4064

Set includes: Misc. pipe fittings, air hoses; clevises, brake chain; brake staff brackets, fittings; brake wheel; retainer valve, cylinder release valve, push rod; brake levers; NY brake cylinder, mounting brackets

On the C&S, this brake system was used on the truss rod cars with archbar trucks, built for and by the C&S. (ie. Gons, Box Cars, Stock Cars, Caboose).

A similar system was used on most F&CC Box Cars. These cars were subsequently sold to other railroads. In many cases, the brake system was maintained (ie. SP NC, Montana Southern, Pacific Coast RR, Magma, and N-C-O).
